

HOW CAN TECHNOLOGY HELP YOU COMMUNICATE?

Almost all domestic and social activities involve some form of communication with other people. GRP Speech pathology facilitates communication for people who have difficulties conveying their thoughts and feelings, to 'have a say' and 'understand' language in everyday situations. A personalised device can help them convey what they want to say and reengage in their daily activities.

There are a broad range of communication devices that are available. GRP's Speech pathologists are specialists in assessing communication requirements, customising communication systems and recommending the most suitable system.

Technological systems may include:

- Speech generating devices
- Computers
- Tablets
- Mobile phones
- Eye scanning devices

Other Communication Systems

Speech pathologist also train and help implement other systems such as:

- Object symbols
- Communication boards/books
- Books
- Key ring mini cards
- Gesture and manual sign.
